Aside:
# XML in SQL:

Standard
SQL
tables

Country

atomic values,
DATE

SQL with
__Object-__
Orientation

City Obj Table

Tasks of Objects

user-defined Object-
Classes

⟹ built-in Datatype **XML Typo:**

Coax XML

⟹ methods in __SQL__ • to work on XML
                            • to construct XML

---

Se 377

`<xsl: template   match = 'counts' >`

`<xsl: apply-templates   select = ". // city" >`

`<xsl: sort   select = "./population[last()]"`

wrt. the cities

`data-type = "number"   order = "descend"`

```
[ xsl
  body
  commands ]
```

`</xsl: apply-templates >`
